

Demo project

supported by

"Let your waste enlighten you"

This biogas project utilizes the organic fraction of municipal solid waste in co-digestion with thin stillage from a neighbouring bio-ethanol production plant.

Country: Argentina

Developing Company:

Biogas utilization

Combined Heat-Power

Feedstock

Thin stillage

Organic fraction of municipal solid waste

Electricity production (est.)

17 GWh per year

Operation

Public grid injection

DiBiCoo is an international project supported by the Horizon 2020 programme of the European Commission and implemented by GIZ in cooperation with 12 experienced organizations across four continents with the overall objective to establish closer cooperation between European technology suppliers and biogas stakeholders in the partner countries Argentina, Ethiopia, Ghana, Indonesia, and South Africa. The activities focus on capacity building, support to establish favourable for cooperation in the biogas sector as well as the development of promising biogas projects. These biogas projects will lead to increased energy security, local added value, job creation and the share of renewable energy at local level while reducing greenhouse gas emissions. In each partner country one project idea was selected as demo case to be a show case about development in the biogas sector in it's country.

DiBiCoo has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 857804.
