DiBiCoo – Digital Global Biogas Cooperation  
Grant Agreement N°857804

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 857804. The sole responsibility for the content of this document lies with the authors. It does not necessarily reflect the opinion of the EU.

## Executive Summary of D7.5

The publications of the DiBiCoo project help fulfill the overarching aim of dissemination and communications activities intended to deliver the maximum impact and make available the information generated by the project to all those interested. This report compiles all publications in technical magazines and public media done by partners in the project, as part of their commitment to issue a publication on the project and its interim results to local, international and European technical magazines and or public media.

The publications in this report were made in various media houses across European countries, as well across the five importing countries. The report also includes 13 press releases announcing the launch of the project and key milestones until the completion of the project.

Furthermore, also included is a list of internal publications by the project partners.

## Summary of the DiBiCoo Project

The **Digital Global Biogas Cooperation (DiBiCoo)** project is part of the EU's Horizon 2020 Societal Challenge 'Secure, clean and efficient energy', under the call 'Market Uptake Support'.

The target importing emerging and developing countries are Argentina, Ethiopia, Ghana, South Africa and Indonesia. Additionally, the project involves partners from Germany, Austria, Belgium and Latvia. The project started in October 2019 with a 33 months-timeline and a budget of 3 Million Euros. It is implemented by the consortium and coordinated by the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH.

The overall objective of the project is to prepare markets in developing and emerging countries for the import of sustainable biogas/biomethane technologies from Europe. DiBiCoo aims to mutually benefit importing and exporting countries through facilitating dialogue between European biogas industries and biogas stakeholders or developers from emerging and developing markets. The consortium works to advance knowledge transfer and experience sharing to improve local policies that allow increased market uptake by target countries. This will be facilitated through a digital matchmaking platform and classical capacity development mechanisms for improved networking, information sharing, and technical/financial competences. Furthermore, DiBiCoo will identify five demo cases up to investment stages in the 5 importing countries. Thus, the project will help mitigate GHG emissions and increase the share of global renewable energy generation. The project also contributes to the UN Sustainable Development Goals (SDG 7) for 'Affordable and clean energy", among others.

Further information can be found on the DiBiCoo website: [www.dibicoo.org](http://www.dibicoo.org).

## Publications of the DiBiCoo Project

The DiBiCoo Project has published 44 pieces on different platforms between all partners in the consortium. Below is a table summarizing the publications by title, partner organisation and link to the publication. For further information on the publication the links below lead to the pages which have more detail.

*Table 1: Publications of the DiBiCoo Project*

## 1 Types of Publications

The DiBiCoo Project published written and other form of non-traditional publications pieces focusing on different stages and elements of the project. These included submissions in peer-reviewed papers, technical magazines, public media, press releases as well as internal publications in periodic newsletters and digests.

### 1.1 Public Media

Thirteen of DiBiCoo's publications were those published by public media. These included stories on the importance and potential of biogas in South Africa, headways in regulatory frameworks for the biogas sector in Ghana, the growing interest of Europe in Africa's biogas sector, and non-traditional publication podcast publication on the role of biogas for regional energy supply and global technology transfer.

More information on the details of the publications can be found [here](#).

**Biogas Is A Sleeping Giant In A World Of Loadshedding And Landfill Airspace Shortages**

A perfect storm is brewing

Since 2007, the average standard Eskom tariffs have risen by 307%. South Africans have also been subject to prolonged periods of load shedding. Last year (2021) saw the most substantial periods of load shedding experienced yet, and the forecast doesn't look any better. As of November 2021, load shedding had occurred for 1.136 hours. Continuous tariff hikes, and unpredictable periods of sustained load shedding pose a significant threat to business operations.

## 1.2 Technical magazine

A substantial number of the publications of the DiBiCoo project, 31 out of 44, were published on technical magazines including those featuring energy, environment or technology. Some of the topics covered by technical magazines included an overview of biogas and gasification technologies, the digital matchmaking platform, and local stakeholder workshops.

### 1.3 Peer reviewed scientific papers

Peer reviewed publications on the DiBiCoo project, excluding papers that were submitted or presented at regional or international conferences included papers on the Survey of Digest Production of Biogas Plants in Argentina, Biogas Market in Indonesia: The Roles of Carbon Trading and The potential of Biogas in Energy Transition in Indonesia.

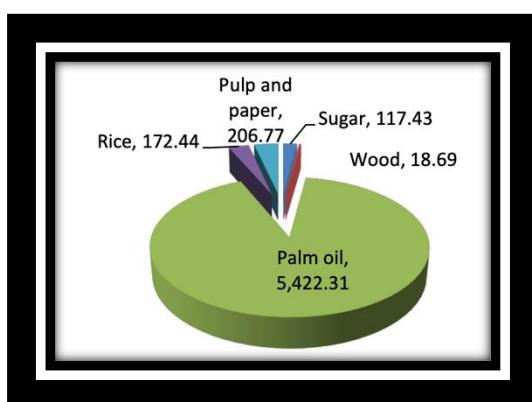

Figure 5: Screenshot of peer reviewed publication on The potential of Biogas in Energy Transition in Indonesia

Abstract	Abstract:
Document Sections	As a consequence of being one of the largest greenhouse gas emitters, Indonesia targets emission reduction through several strategies, including command and control, infrastructure and technology investment, and market-based mechanisms. Whether the applied strategies are effective measures was unconvincing, as the amount of emission kept increasing. Therefore, this study focused on identifying the roles of market-based regulation on the renewable energy sector, particularly biogas. By employing qualitative content analysis from desks and a systematic literature review, this study was conducted to address the implication of emission incentives and taxation to the biogas market in Indonesia. The result showed that the absence of a clear baseline, price, and trade flow are the main obstacles to maximizing co-benefits between these two terms. Maintaining sustainability and low carbon footprint at every stage of biogas production is also challenging. However, the biogas sector has great potential to get into those market schemes by making its various utilizations as tradable commodities.

## 1.4 Press releases

The DiBiCoo project produced more than 13 press releases through its years of implementation. The press releases covered milestones of the project; from the onset of the project, to the announcement of the matchmaking platform as well many achievements along the way. The full list is provided above in the first section.

## 2 DiBiCoo Website

The publications of the DiBiCoo project have been consistently featured on the DiBiCoo website along with reports on the project and other relevant audio and video works centered on the DiBiCoo project, its processes and results. Part of the measures evaluating the success of the project was producing 15 articles published on the web portal and distributed to other web media channels.

The DiBiCoo website features 44 news articles, scientific publications as well as 42 other internal news and write ups on the various project milestones including local stakeholder workshops, virtual study tours, webinars, and matchmaking events.
